School Stats Annual

Information

<u>What does it do?</u>

School Statistics Annual enables you to quickly find the number of pupils and percentage who...

- Are in a particular year group or class.

- Are boys or girls

- Have special educational needs

- Are on free school meals

- Have English as their second language

- Have statements

- Belong to a particular ethnic group

- Are current pupils, or are pupils whom have left the school

It also calculates point scores, average point scores, end of year 6 predictions, whether pupils are above or below age expected level, average sublevel progress and sublevel progress since previous year. There is also support for foundation stage and 'p level' assessments.

You can filter any of the above criteria to give specific feedback. For example, you may wish to know how boys are performing. Or you may wish to know which ethnic group are performing least well in maths.

It has also been used very effectively as a research tool.

<u>What are the requirements?</u>

You will need microsoft excel (some features will not work with versions older than 2002). You will also need to 'enable macros' when opening the spreadsheet.

<u>What are the limitations in the demo?</u>

The demo is limited to 28 pupils. The full version can have up to 1000. The demo has been set up with made up names, although you can edit any of the information. Live demonstrations are available if you are a Skype user. Please email to arrange a convenient time for this.
